

AUTOADAPT TURNY EVO

The Turny Evo is a seat lift that moves the car seat completely outside the vehicle and lowers it down to your desired level. This makes it easier for you to sit down or transfer from a wheelchair. Once you're seated, push a button and the Turny Evo will lift you inside the car. It's a simple yet very effective way to make your car more accessible.

Getting seated in today's aerodynamically built cars can be very cumbersome. However the Turny Evo isn't just a solution for wheelchair users, it's for anyone that needs a little help getting in and out of their car.

The Turny Evo is the most advanced seat lift on the market today. It has unique features that make it possible to use in car models where other seat lifts won't work.

EASY TRANSFER TO AND FROM YOUR WHEELCHAIR

When transferring to and from the Turny Evo, you can do so completely outside the vehicle. Even better, the Turny Evo can lower the seat to your level. This means that it doesn't matter if you're transferring from wheelchair to seat or seat to wheelchair, you can always transfer to a lower point.
