

A DRIVING SOLUTION FOR QUADRIPELEGICS

The Long Arm Brake & Accelerator was designed around the needs of the quadriplegic driver. Available in several variants to ensure minimised fatigue when braking & accelerating. Braking requires one third less effort compared to conventional controls.

2-Point Handle
(push = brake / pull = accelerator)

CL002A Handle
(push = brake / pull = accelerator)

Buttons for
auxiliary
controls

CL002B Handle
(push = brake / radial = accelerator)

Adjustable
height to
suit all hand
sizes

Features:

- Reduced braking effort via improved leverage
- Greater sensitivity when braking
- Smooth acceleration with minimal fatigue
- Acceleration safety cut-out mechanism
- Push/Radial or Push/Pull options available
- Ergonomic design ensures easy button activation
- Electronic brake locking function
- Easy height and angle adjustment
- Knee airbag compatibility
- Left and right hand versions
- Nationwide backup service

Manufactured by the world leaders Fadiel Italiana and proven in Europe since 1999. All options take advantage of electronic acceleration that minimises fatigue and translates to a smooth progressive acceleration curve. For safety, in the event the accelerator and brake are applied simultaneously, the accelerator is cancelled.

Auxiliary control buttons can be activated with flexion of the wrist, no finger dexterity required. Voice command is also available to function indicators, lights, wipers and horn.
